

Aristo API

An easy to use, fast, and reliable application programming interface for algorithmic trading of Hong Kong stocks

Aristo Securities Limited

September 9, 2016

Aristo API

- Aristo API (application programming interface) is implemented in Java.
- Java is one of the most popular language in the world.
- Provides robust and reliable interface for account and order management, with streaming real time market data.

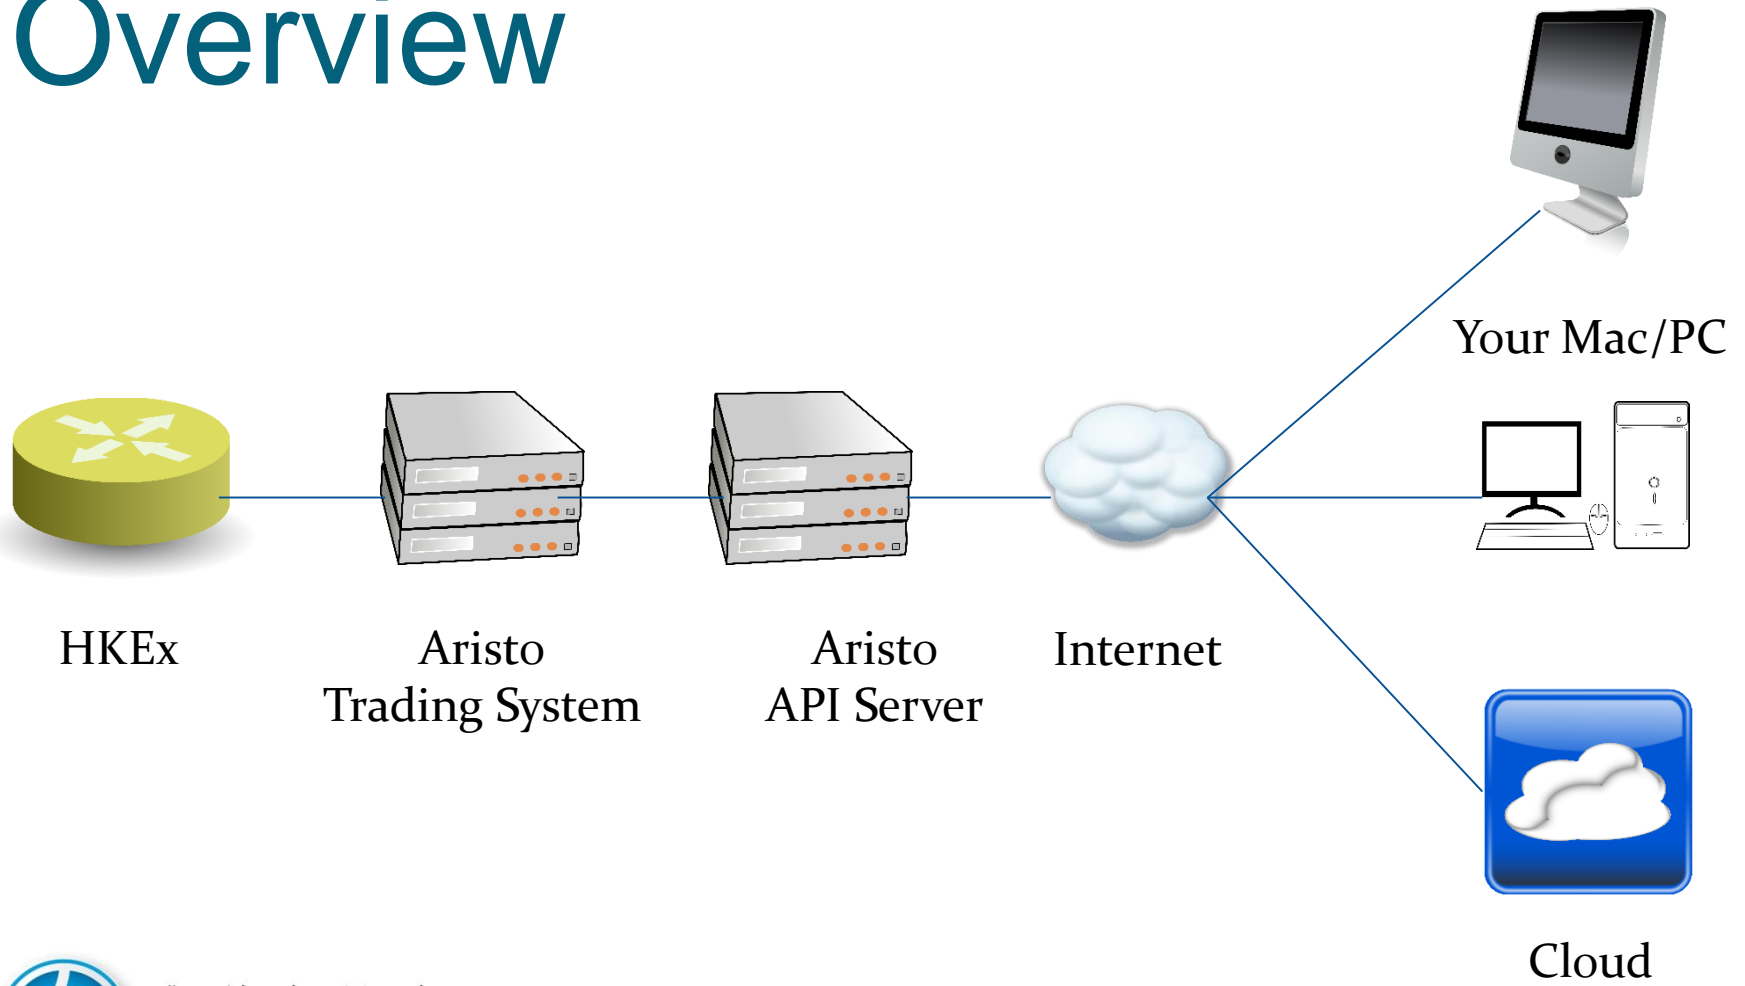

Why API?

- Reliefs you from message protocol handling
- Gives you the possibility of building your own user interface to suit your usage and style
- Allows you to build sophisticated and customized algorithms for stock trading
- With algorithmic trading, you will
 - Minimize emotions
 - Preserve discipline
 - Diversify trading
- Low latency market access
